Problem-Solution Fit Canvas for ShopEZ:

The Problem-Solution Fit Canvas was used to analyze the relationship between the target customer and the solution provided by ShopEZ. This canvas helped in identifying the customer segment, their jobs-to-be-done, triggers, emotions, available solutions, constraints, behaviour and channels — and how ShopEZ addresses each of these effectively..

Problem-Solution fit canvas 2.0

Purpose / Vision

Define CS, fit into CC 1. CUSTOMER SEGMENT(S) CS Who is your customer? i.e. working parents of 0-5 y.o. kids Everyday online shoppers including working professionals and college students who want to buy products from home quickly, safely and at the best price	6. CUSTOMER CONSTRAINTS CC What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available devices. Limited time to browse multiple platforms and complete lengthy checkout processes Concerns about payment security and sharing personal data online	5. AVAILABLE SOLUTIONS AS Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper is an alternative to digital notetaking. Existing platforms like Amazon and Flipkart — but they are complex and overwhelming for simple purchases
Focus on J&P, tap into BE, understand RC 2. JOBS-TO-BE-DONE / PROBLEMS J&P Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides. Find and purchase products online without visiting physical stores Compare prices and find the best deals and discounts across different product categories Track orders easily after placing them online	9. PROBLEM ROOT CAUSE RC What is the real reason that this problem exists? What is the back story behind the need to do this job? i.e. customers have to do it because of the change in regulations. Existing shopping platforms are too complex with too many steps, unclear pricing and poor order tracking — making online shopping a frustrating experience for everyday shoppers	7. BEHAVIOUR BE What does your customer do to address the problem and get the job done? i.e. directly related: find the right solar panel installer, calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace) DIRECTLY: Searches for products online, compares prices and reads reviews before buying INDIRECTLY: Checks social media for deals, asks friends for platform recommendations
Identify strong TR & EM 3. TRIGGERS TR What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news. Need to buy products urgently without going to a physical store	10. YOUR SOLUTION SL If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour. ShopEZ is a simple MERN stack e-commerce platform that allows customers to easily browse products by category, add to cart, place orders with cash on delivery or online payment, and track order status in real time —	8. CHANNELS of BEHAVIOUR CH 8.1 ONLINE What kind of actions do customers take online? Extract online channels from #7 Browses shopping websites, searches products on Google and clicks on ads 8.2 OFFLINE What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development. Visits physical stores to check products and asks friends for recommendations

Customer Segment (CS): The target customer segment for ShopEZ is everyday online shoppers including working professionals and college students who prefer shopping from home. This segment was chosen because they represent the largest group of online shoppers who need a simple and reliable platform for their daily shopping needs.

Jobs-to-be-Done / Problems (J&P): The three main jobs identified are finding products online, comparing prices and tracking orders. ShopEZ addresses all three through its product search and category filter feature, clear discount pricing display and real time order status tracking system.

Triggers (TR): The two main triggers that push customers to look for a better solution are frustration with complicated checkout processes and the urgent need to purchase products without visiting a

physical store. ShopEZ solves this with a simple and fast checkout process that requires minimal steps.

Emotions Before / After (EM): Before using ShopEZ, customers feel frustrated and overwhelmed with existing complicated shopping platforms. After using ShopEZ, they feel confident and satisfied due to its clean interface, secure payment and fast order processing — showing a clear positive emotional transformation.

Available Solutions (AS): Existing solutions like large e-commerce platforms are too complex and overwhelming for simple purchases, while physical stores are time consuming and inconvenient. ShopEZ fills this gap by offering a simpler and more focused shopping experience that is easy to use for everyday shoppers.

Customer Constraints (CC): The two main constraints identified are limited time and concerns about payment security. ShopEZ addresses both by providing a fast and minimal checkout process and securing all user data and payments using JWT authentication and encrypted passwords with bcryptjs.

Behaviour (BE): Customers directly search for products online, compare prices and read reviews before buying. Indirectly they check social media for deals and ask friends for recommendations. ShopEZ captures both behaviours through its product search, category filter, product reviews and clear discount pricing features.

Channels of Behaviour (CH): Online channels include browsing shopping websites, searching on Google and clicking on discount advertisements. Offline channels include visiting stores to check products and asking friends for recommendations. ShopEZ targets both channels through its clean web interface and word of mouth friendly simple design.

Problem Root Cause (RC): The root cause of the problem is the lack of a simple, secure and efficient shopping platform that handles everything in one place. Existing platforms are too complex with too many steps, unclear pricing and poor order tracking. ShopEZ was built specifically to eliminate this root cause.

Your Solution (SL): ShopEZ is a MERN stack e-commerce platform that directly solves all identified problems. It provides easy product browsing by category, secure JWT authentication, clear discount pricing, simple cart management, fast checkout with cash on delivery option and real time order status tracking — all in one clean and simple platform that fits perfectly within the customer constraints identified.
