

Project Design Phase
Proposed Solution Template

Date	15 June 2026
Prepared By	Sowmya Kella
Project Name	ShopEZ: E-Commerce Application
Maximum Marks	2 Marks

Proposed Solution:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Everyday online shoppers struggle with complicated shopping platforms that have unclear pricing, lengthy checkout processes and poor order tracking. There is a need for a simple, secure and efficient online shopping platform that makes the entire shopping experience smooth and hassle free.
2.	Idea / Solution description	ShopEZ is a full stack MERN e-commerce web application that allows customers to register, browse products by category, search by keyword, add products to cart, place orders with cash on delivery or online payment and track order status in real time. Admins can manage products, orders, banners and users through a dedicated admin panel - all in one single platform.
3.	Novelty / Uniqueness	ShopEZ stands out with its clean and minimal user interface, JWT secured authentication, real time order status tracking, clear discount pricing display and a dedicated admin dashboard for complete store management — all built from scratch using the MERN stack.
4.	Social Impact / Customer Satisfaction	ShopEZ saves time for busy shoppers by providing a simple and secure shopping experience with clear pricing and fast checkout — improving customer satisfaction and trust.
5.	Business Model (Revenue Model)	ShopEZ can generate revenue through commission on each product sold on the platform, premium seller accounts for businesses wanting to list their products,

		promotional banner advertisements on the homepage and premium membership plans offering exclusive discounts and free delivery for subscribed customers.
6.	Scalability of the Solution	ShopEZ is built on MongoDB Atlas cloud database which can scale automatically as the number of users and products grows. The REST API backend built with Node.js and Express.js can handle increasing traffic efficiently. New features like payment gateway integration, email notifications, product image upload and mobile application can be added in future without affecting the existing system .
